INTERIOR STANDARD AND ATELIER22 ARCHITECTS

The Muccurum Residence standard has been adjusted by designers and architects to perfectly match the overall philosophy of the project and that is the emphasis on details, because Muccurum Residence wants to provide people with the highest quality and set the trends for living by the Adriatic Sea.

THE FIRST AND UNIQUE HEALTHY RESIDENCE

We present to you the first and unique residence near the Adriatic Sea in which **Senseir** devices - an intelligent device for monitoring indoor air quality, which will also be powered by solar energy - will be installed as standard equipment in the common areas. The air quality will be monitored in real time based on measurements of humidity, temperature, CO2, dust, CO, radiation, and in the event of a non-standard situation, they can warn in time with an LED indicator or sound signal, thanks to which we can avoid the spread of bacteria and viruses.
